

COLEX[®] SHARPCUT

YOU PRINT **WE CUT**

CONVEYOR & AUTO FEEDER

An Affordable Automated Finishing System

*A combination of
versatility & speed,
which is unparalleled*

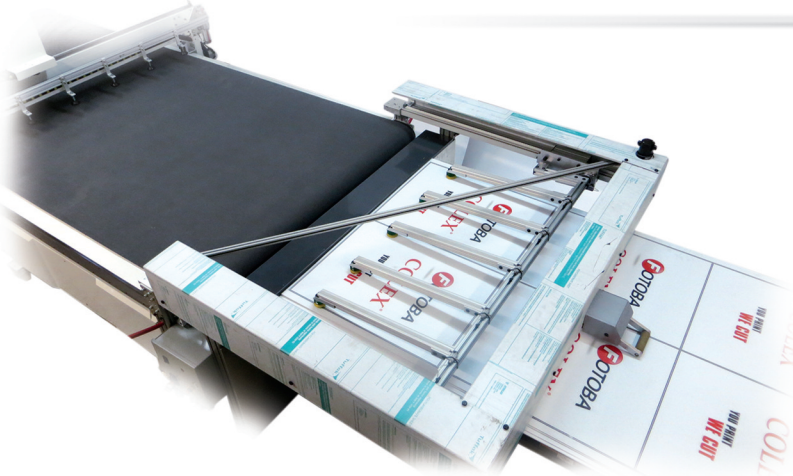

- Automated Finishing System
- Universal Triple Tool Head
- Vision Registration System & Camera
- Energy Efficient 6-Zone Vacuum System
- True 5' X 10' Work Area
- Solid Steel Welded Frame
- Precision Balanced Aluminum Rollers

The Colex Sharpcut Conveyor can be used for a variety of applications:

Removal of Finished Jobs: The Sharpcut Conveyor efficiently speeds up the removal of finished jobs from the cutting table.

Fabrics/Textiles Cutting: Combine the Sharpcut Conveyor with the Roll Feeder and the Clamping Bar to cut fabrics/textiles.

Board Cutting Pallet to Pallet: Combine the Sharpcut Conveyor with the Automatic Board Feeder (including Pallet Table) and Clamping Bar for board cutting. Cuts up to 70 boards (soft) 4' X 8' per hour.

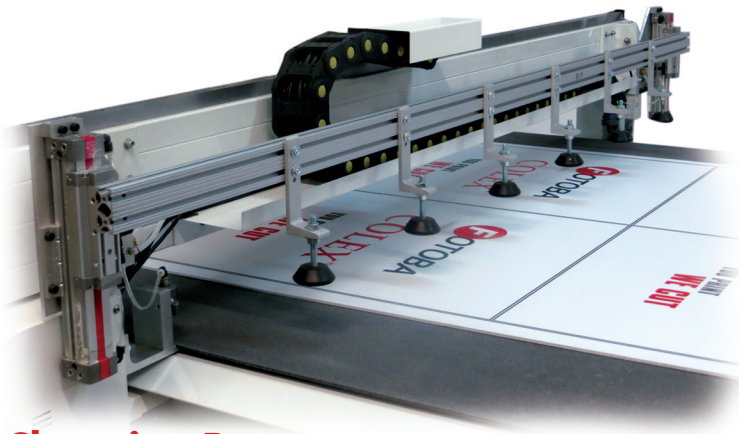

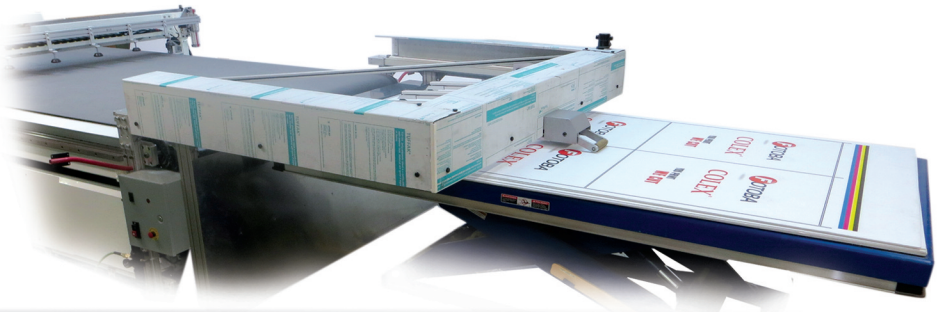

Automatic Board Feeder

The board feeder is designed to load semi rigid to rigid boards from the pallet table onto the conveyor belt. It is designed to work with a large array of material sizes and thicknesses.

Pallet Table

When used with the Automatic Board Feeder the pallet table will automatically maintain the material height. The pallet table drops down to 6" in height for easy loading and unloading of the pallets.

Clamping Bar

The clamping bar insures that the material advances at the same rate as the belt as it advances down the table. The clamping bar is to be used in conjunction with either the Roll Feeder or the Automatic Board Feeder to insure consistent material placement before cutting.

Roll Feeder

For manual and automatic feeding of flexible rolls.
